## IIITB Student Helpline

I have designed a student helpline for students on campus. This is one place for all complaints and queries. All you need to do is sign in and you can register complaints, chat with the bot, go through the FAQ and even report ragging.

I feel this will greatly help students as lodging complaints can be a tedious process. You need to know the right place to go to, who to contact. Many a times people feel uncomfortable which reporting. This app eases the process for both the students and the administration as even they get all complaints.

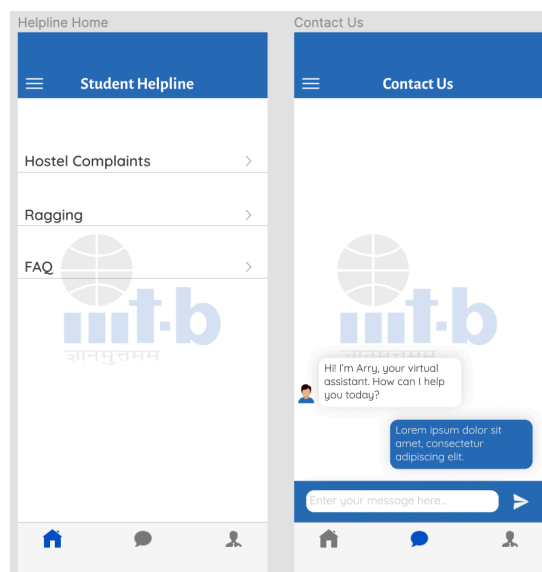

I also took some reference from the Manage-It website shared with us to classify the complaints.

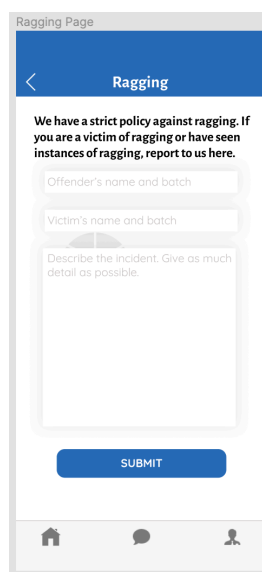

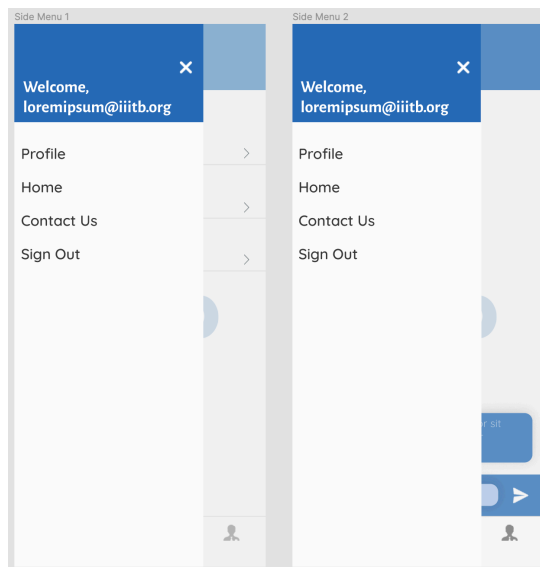

### IMPLEMENTATION

This project has been made on Figma. Click [here](#) to access it.

- All the shapes used were dragged and dropped directly onto the canvas. All icons used were taken from icons8.com.
- The blue colour was taken to match other existing college apps.
- I referred to samples to decide on block ratios.
- The main part was figuring out what goes where and which animations to use. I tried to match animations to what we see in real life applications as much as possible and according to what Figma could provide.

Here are a few snapshots:

## FUTURE SCOPE

- This design could be implemented and an actual application could be created.
- The design could be extended to a web application as well.
- Currently, only limited menus were added to give a feel of the design. We could extend it to add more menus. For example, the Home page can have another option for services, or we could add a page that connects us to counselling services.
